

Power Solutions Overview

Allegro’s proven power solutions give decision makers the information and tools they need to efficiently manage their business. Allegro Power Solutions are used by companies ranging in size from global power companies to local co-ops. Generation fueled by natural gas, coal, nuclear, solar, fuel oil, hydro, and geothermal is managed efficiently. Physical and financial positions spanning power, fuel, transmission, ancillary services, swaps, options, and structured transaction are captured and valued giving decision makers a holistic and transparent view of their portfolios. P&Ls, volumes, risk metrics, exposures and other key indicators are updated on a real-time basis.

Generation

Allegro’s Generation solutions give asset managers the tools they need to optimize, value, and settle fuel and power transactions – and physical assets. Allegro provides detailed and real-time reporting of P&L, credit exposure and other metrics, as well as automated settlement and regulatory compliance. With Allegro, Power generators have a single platform to manage their entire business. Term, spot and evergreen contracts are fully supported. Flexible pricing formulas include discounts and premiums to spot index prices or other benchmarks. With full visibility of the entire generation business, Allegro enables rigorous valuation and risk management – driving effective asset management.

Transmission

Allegro’s Power solution manages physical power scheduling, transmission and actualization for energy companies that move physical power including generators, utilities, municipals, cooperatives, energy traders and merchants. Users have full support for multiple currencies and the ability to schedule across time zones. Schedulers can view transactions in real-time, as they are entered by traders. Configurable views of power scheduling data allow users to rapidly sort or filter information. The solution also features user-defined power products, such as peak and off-peak, and user-defined transmission periods that can account for various holiday calendars and adjust for daylight savings time. Allegro allows traders and schedulers to accurately value their transmission assets along with the ability to utilize them with seamless integration from trading to scheduling physical power.

Power Marketing and Trading

Allegro Solutions for Power Marketing and Trading deliver the robust trader tools that Allegro is known for. Our proven risk management solution drives transparency across the broad spectrum of instruments contained in today’s complex portfolios. Real-time scenario analysis, market alerts, and credit monitoring benefit front and middle offices, while settlement, invoicing, and reconciliation functionality enhance back-office efficiency. Real-time valuation of energy, capacity, ancillary services, structured transactions, derivatives, swaps, and physical positions allow marketers to execute quickly, and with confidence. Allegro’s Trade Execution solutions provide tools to efficiently capture and confirm physical and financial trades for commodities.
